EDUCATION

Don Bosco Institute of Technology
Bengaluru, Karnataka

B.Tech in Computer Science Engineering

Expected 2027 | **GPA: 8.0/10.0**

Coursework: DSA, Database Systems, Software Engineering, Web Development

TECHNICAL SKILLS

Languages
JavaScript, Java, Python, C, Kotlin, HTML, CSS

Frontend / Mobile
React Native, Expo

Backend
Node.js, Express.js, REST APIs

Database
PostgreSQL, Prisma, Database Systems

Cloud & DevOps
Docker Compose, AWS, GCP, Git, GitHub

Core CS
Data Structures & Algorithms, OOP, Software Engineering

CERTIFICATIONS

- AWS Cloud Practitioner Essentials — AWS, 2026
- Cloud Computing 101 — AWS Educate, 2024
- Machine Learning Foundations — AWS Educate, 2024
- DSA with Java — Apna College, 2024
- Postgres-Compatible AI Apps on GCP — GDG Cloud Kochi, 2025
- Serverless Data Agents on GCP — GDG Cloud Kochi, 2025

SUMMARY

Computer Science Engineering student graduating in 2027 with hands-on experience building full-stack applications using TypeScript, React Native / Expo, Node.js, Express, PostgreSQL, Prisma, Docker, and REST APIs. Built production-style authentication, role-based access, booking workflows, offline synchronization, and containerized development environments. Also experienced in Java, Python, AWS, Git / GitHub, CI / CD, and open-source contribution.

PROJECTS

Wevsocial — Full-Stack Social / Super-App Platform

j React Native j Expo j Node.js j Express.js j PostgreSQL j Prisma j Docker j JWT

- Built a full-stack mobile platform with a React Native / Expo client and TypeScript Node.js / Express REST backend, backed by PostgreSQL and Prisma.
- Implemented authentication and role-based access with JWT access / refresh tokens, session persistence, and secure mobile credential storage.
- Designed a host-shell architecture with isolated Sports, Events, and Care mini-apps connected through a shared SDK / bridge and permission model.
- Implemented sports booking workflows, backend routes for authentication, sports, care, and bookings, and offline booking state synchronization with conflict handling.
- Containerized the backend and PostgreSQL environment with Docker Compose, making the development stack reproducible across machines.

OfflineImageGen — Offline AI Image Generation

Kotlin j Android SDK j ONNX Runtime j Stable Diffusion

- Built a fully offline Android application that generates images from text prompts without internet access, API keys, or cloud infrastructure.
- Implemented the complete inference pipeline including CLIP tokenization, text encoding, DDIM scheduling, UNet denoising, and VAE decoding through ONNX Runtime on-device.
- Kept prompts and generated images on-device, removing dependence on external image-generation services.
- GitHub: github.com / mohithshuka / offlineimageGen

OPEN SOURCE & ENGINEERING EXPERIENCE

Open Source Contributor — Docker / Containerization

GitHub j Git j Docker

- Contributed to Docker and containerization-focused projects through GitHub pull requests and issue reporting.
- Worked with feature branches, rebasing, upstream synchronization, commits, pull requests, and GitHub CI workflows.
- Built and verified a GitHub Actions CI pipeline connecting automated test / build validation with repository changes.

ADDITIONAL

Competitive Programming: LeetCode, HackerRank, and Codeforces using Java and Python.

Hackathons: Xcelerate 24-Hour Hackathon, NIKSHATRA E-Summit, Bangalore Institute of Technology (2025); The Hunger Games: Survival of the Smartest, AWS Cloud Club, Don Bosco Institute of Technology (2026).
